To run the program:

1. Navigate to the directory "CSCI3060UProject/Phase3/prototype2Classes". The primary classes, header files and the script are stored here.
2. Compile the code by running the main.cpp
3. Run the program with the command ./auction-system <current-accounts-file> <available-items-file> <transactions-file>, replacing the file paths with the corresponding paths.

To run the test script:

4. Make the script file executable with the command chmod +x test.sh.
5. Run the script with the command ./test.sh.
